How do you turn 20 separate logistics programs into one seller strategy?

Walmart 2025–2026

> We had plenty of programs. What we didn't have was a way to talk about them as one solution.

TRANSFORMATION EXPERIENCE | EXECUTIVE-LEVEL SCOPE | BUSINESS RESULTS

1. Everyone was starting with WFS.

The pattern kept showing up: introduce Walmart Fulfillment Services first, then say, "If that's not the right solution for you, look at this."

The unintended message was that everything else was a consolation prize. Our project to create consistent seller-facing language had stalled: no one could position the portfolio.

I felt confident there was a solution that I just wasn't seeing yet, so I got closer. I listened to calls with sellers, analyzed reports, and studied programs until I found repeatable patterns of behavior and system usage,

A PORTFOLIO. NO SHARED POSITION.

2. From program pitches to lifestyle selling.

BEFORE

Program-led selling

Program → Pitch → Next program → Next program

AFTER

Lifecycle selling

Seller need → lifecycle phase → best-fit solution.

01 Explore & learn	02 Onboard & prepare	03 Source & plan	04 Store & move
05 List & launch	06 Fulfill & deliver	07 Support & return	08 Scale & grow

Inventory moved through the seller's business in a predictable cycle - beginning with them identifying what they wanted to sell and where. From there, they had to procure it, and everything else fell into line.

3. The north star became simple.

> "Present a holistic logistics solution without making any program sound more important than another."

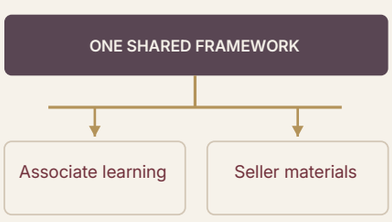

ONE PORTFOLIO. EQUAL STANDING.

When the work drifted back toward old habits, I asked: does this bring us closer to the goal or farther from it? The team gained a shared decision rule without needing me to make every decision.

4. We built one language across the experience.

I built the framework and wrote the core copy. Instructional designers, product and program SMEs, Brand, Marketing, Legal and copy reviewers helped bring it to life.

"We had aligned the approach with leadership. How it came to life was their discretion. What came to life was not."

AT A GLANCE

20 logistics programs

8 seller lifecycle phases

3 months kickofftolaunch

13+ partner groups

WHY THIS STORY

This is how I create clarity when there isn't a single right answer: bring competing perspectives together, establish a shared decision rule, and turn ambiguity into something an organization can actually use.

THIS STORY ALSO DEMONSTRATES

- Strategic thinking
- Simplifying complexity
- Influence without authority
- Cross-functional leadership
- Enterprise execution

IF WE TALK, ASK ME ABOUT

01 The assumption I was most worried the SMEs would prove wrong.

02 What would have made the three-month timeline fail.

03 How I knew we had enough alignment to stop debating and start building.

04 The tradeoff between speed and broader stakeholder involvement.

05 What leadership needed to see before they backed the change.

WHAT I'M PROUD OF
We moved fast without making it "Katie's project." We brought people along, challenged familiar ways of thinking, and crossed the finish line together.

MY GUIDING PRINCIPLE
Alignment doesn't require agreement on every decision. It requires agreement on how decisions get made.

IF I HAD A DO-OVER
I wouldn't manufacture one. I'm genuinely happy with how we approached this project.
