

# Can training prove that it makes money?

My team was proud of completion rates. I wanted to know if whether anything changed after someone completed the training.

Data and Measurement

Learning and Capability Expertise

Business Results

## What we could see

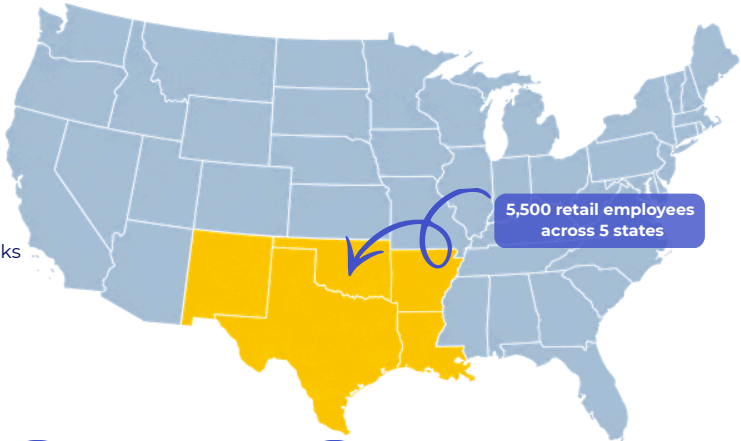

### Training Activity

- ✓ Attended
- ✓ Scheduled
- ✓ Incomplete

### Learning Results

- ✓ Knowledge checks
- ✓ Completion rate

5,500 retail employees across 5 states

## What we couldn't see

### Behavior

Did they use what they learned?

### Performance

Did it drive sales?

### Business Result

Did it impact revenue or operational costs?

They knew learning and facilitation, but many weren't comfortable with documentation, business systems, performance analysis, or conversations with leaders about ROI.

I created a bootcamp and brought in experts to teach the team how to use the same business systems the store managers used. Experts taught the team the same business systems our store managers used. I taught them how to calculate ROI by connecting performance results to the cost of the effort. Then I gamified influence and persuasion skills so they could practice getting others to act — not just understand.

### LISTEN

What does the customer need?

### THINK

What's the solution? Why that? What else could there be?

### COACH

Have you considered this?

### PRACTICE

You're going to pitch it. Do it with me first.

## Testing It in the Real World

Accessory sales gave us a clean test — it had It had years of historical measurement at individual and group levels, so we could identify consistently low performing locations.

Trainers went into those stores and worked beside associates, during real customer interactions.

Within 90 days, the participating stores generated \$900,000 in additional accessory sales.

**\$900K**

The program was incorporated into new trainer onboarding and upskilling and gave regional training managers credibility with their leaders.

## AT A GLANCE

**5,500**  
regional employees

**\$900K**  
accessory sales

**90 days**  
measured impact

**Live**  
side-by-side coaching

## WHY THIS STORY

I've never been satisfied with proving that people learned something. I want to know what happened afterward — what they did differently, what changed in the business, and whether the work was worth the investment.

This story also demonstrates:

Measurement strategy

Sales transformation

Experiential learning

Performance coaching

Commercial acumen

## IF WE TALK, ASK ME ABOUT

- Why I didn't build the first bootcamp around "How to train."
- What I learned from our lowest-performing stores.
- How this impacted future training campaigns.
- How regional leadership responded to the growth.
- How I felt about 5% voluntary turnover.
- What gamification methods I used, and how trainers responded.

## WHAT I'M PROUD OF

I changed how people measured their success, helping them speak the same language their customers did, driving credibility and confidence. They learned to look beyond the classroom and ask where their efforts were landing.

## MY GUIDING PRINCIPLE

Learning isn't finished when someone can repeat the objective. Learning cycles when behavior changes.

## IF I HAD A DO-OVER

I'd bring in local sales leaders before execution, or as part of the bootcamp. Having them know what we're testing
